

**AMENDMENTS TO THE ABSTRACT**

**Please substitute the following paragraph for the abstract now appearing in the current filed specification:**

--An online system and method for entrusting a semiconductor system are provided. The online system includes a management and control unit, a database, at least one analysis module and a reply element. The management and control unit receives and processes--required information on a semiconductor package order inputted by a user. The required information relates to semiconductor package. The database records the required information and schedule information of processing the semiconductor package order. The analysis module generates an analysis result of analyzing the required information on the semiconductor package order. The reply element sends the analysis result of the required information to the user.--
